Podway

by Transit X

Podways provide the convenience of cars, the capacity of trains and the efficiency of bicycles — **without land use or government funding.**

Podways are installed alongside roadways or highways without disruption — while integrating utilities and street lighting. Podways generate and use 100% clean and renewable energy. Podways help make communities walkable, safe, quiet, clean and green.

You request a pod that waits at a landing at ground level. Once the door closes, the pod lifts up and merges onto the main guideway, traveling nonstop until landing at your destination stop. Pod stops are conveniently located on each block and parking lot. Fares are affordable and equitable — much less than a taxi. A podway's capacity can scale from low-density to high-density areas.

Pod landing

Building transportation infrastructure creates jobs and grows economies. Podways are privately-funded without needing government subsidies or guarantees.
