

Transit X, LLC presents a preliminary proposal for a privately-funded fleet of fully-autonomous shared electric vehicle network for

Antipolo, Philippines

High capacity • High speed • Nonstop • 24/7 Solar powered • Wait-free • Door-to-door • Resilient

26-page companion Transit X Handbook is available at transitx.com/transitxhandbook.pdf

Transit X proposes to build and operate a privately-financed pod network to carry passengers and freight for Antipolo, Philippines that makes the Transit X service convenient to 95% of the population.

Transit X efficiently services both suburbs and cities and provides for a higher quality of life. See transitx.com for more details. This 3-minute video (transitx.com/video) describes our innovative solution.

Major benefits

- · Reduce congestion
- · Provide parking relief
- · Reduce pollution
- Improve safety

The Transit X Handbook (<u>transitx.com/</u> <u>transitxhandbook.pdf</u>) answers many questions about our service, the company, our technology, and the way we address:

congestion, parking, road safety, pedestrian safety, ADA compliance, sustainability, fares, solar+storage, construction, aesthetics, operations, economic development, quality of service, security, station footprint, equitability, carbon footprint, transit integration, resiliency, reliability, rights-of-way, and open space.

Congestion, parking, pollution, and safety

Most regions suffer from traffic congestion, limited parking, air pollution, and unsafe roads. Potential solutions are costly, but Transit X can solve these challenges without public funding. Transit X can integrate into the built environment, providing both short term relief and a long term solution.

No public funding

Transit X does not require public funding because our business model appeals to investment banks and private equity firms that provide our project financing. Most of our infrastructure is factory-built, so that installation is fast and not disruptive. We have reduced or eliminated many costs of transportation infrastructure including materials, land, construction, fuel, debt service, and driver costs. By significantly reducing our costs, it makes private financing possible.

Proven technology

Our team and partners have built fully automated systems that are now in operation around the world. Transit X may look unique, but the underlying design is very similar to systems that have been operating for 40 years with an exemplary safety record. An in-depth (1000+ hours) technical assessment and feasibility analysis has been completed by Altran, a global engineering firm with

extensive expertise in automated transit systems. The first pilots of Transit X will be deployed by the end of 2018.

Before any groundbreaking, the system will be safety-certified and fully insured.

Service Quality

Transit X provides on-demand, last-mile service that is superior to cars or buses. An operating agreement will guarantee high levels of availability and reliability. Our use of small vehicles (pods) makes this possible. By reducing car use, Transit X creates walkable and bike-friendly neighborhoods.

Less pollution: Air, Sound, Light, Visual, Water

Transit X offers a much higher quality of life by eliminating many forms of pollution. Pods are quiet and have no emissions. Pods offer less visual impact than the existing roads and vehicles, and utility lines can be hidden within the track. At night, there is no light pollution from headlights or taillights. Water pollution from road runoff is significantly reduced.

Sustainable

Transit X runs on 100% sustainable energy. The energy generated from solar panels on the track and stored within the poles is sufficient in most cases, but sustainable power contracts may used to buy and sell power to the grid. Transit X makes it possible to reduce the amount of impervious surfaces and increase green space by reducing the need for parking and roads. By replacing cars, Transit X has a negative carbon footprint.

More Transit & Fewer Cars

Transit X provides the convenience and privacy that people value in cars, yet without the negative impacts of personal cars. Transit X combines the best of mass transit and personal transportation modes which will lead to higher use of mass transit and less use of personal vehicles.

De-risking Projects

Transit X is working with large, established firms to provide fixed-price contracts for the engineering, certification, construction, and operations of a Transit X system. Theses partnerships enable Transit X to de-risk all of the major elements of the project, and provide performance guarantees.

We would work with regional urban planning and construction firms who are familiar with permitting and applicable codes.

Jobs and Workforce Development

Many jobs will be created to build a new transportation infrastructure and transition away from roads. Municipalities that first embrace Transit X will be offered the opportunity to have Transit X manufacturing and assembly jobs in their area. The vast majority of the construction jobs will be locally sourced. Preferential hiring would be given to those workers potentially displaced by the transition to automated vehicles.

Revenue Generator

Not only does Transit X not require public financing, but the local municipality and right-of-ways owners receive 5% of gross revenue, which would be US\$33 million per year average over the first 10 years. For specifics, please see the "Taxes and Fees" section of this proposal.

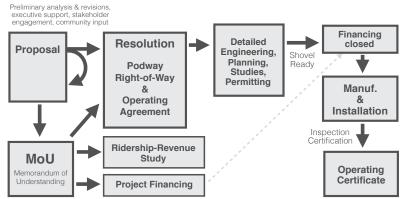

Short and Long Term Solution

A project could be operational within 24 months from the start of a project. Transit X offers a rapidly-deployable solution that provides long term benefits. We would form a local company to build, operate, and maintain the network. At least 75% of the profits would be invested back into the region.

Moving Forward

The diagram shows our general process for working with a municipality or rights-of-way owner. We would refine a proposal to meet your needs, then ask for a letter stating that you would like to move forward with a proposal that includes air rights and and an operating agreement. Example documents and a sample project schedule can be viewed at transitx.com/process

Process for municipalities

Evaluation

Please review our preliminary proposal, and then ask us any questions. We would be happy to provide further information, address specific concerns, or meet with specific people or groups. Any routes or coverage areas shown on the map are only preliminary suggestions and actual routes would be determined based on needs, rights-of-ways, utility corridors, location of trees, and many other factors.

We expect this proposal to be reviewed by one or more committees or working groups. Familiar transportation options, such as buses, light rail, subways, and ride-sharing services (including autonomous vehicles) may have already been considered. Very few options offer the convenience of cars with at least the capacity of buses, and most, if not all, require public funding and subsidies.

Private cars have a dominant mode share because people like the privacy and convenience of a car — despite the significant risks and negative impact associated with them. People won't give up their cars unless the alternative is both better and cheaper. That is what Transit X can provide.

We hope you agree that this proposal offers a way to address your challenges in both the short and long term, providing an option that is better and lower risk than any alternative — including continuing with the status quo.

Whatever process you use to evaluate this proposal, Transit X is open to working with you on refining this proposal to meet your needs. We hope you will conclude that moving forward with Transit X is an excellent opportunity to meet your current and future challenges.

Once we agree to move forward, we need a memorandum of understanding (example at transitx.com/process/mou.html) stating that you intend to pass an ordinance that enables our use of air rights along with an operating agreement.

The buildout of the network would be rolled out in phases, where a first phase could be a 15 to 30 km pilot.

Other Resources

The links below provide general information about Transit X:

- 2 minute video overview (transitx.com/video)
- Transit X Handbook (transitx.com/transitxhandbook.pdf)
- · Letters of Project Financing, Due Diligence, Contracts (transitx.com/letters.pdf)
- Example Resolution (<u>transitx.com/process/resolution.html</u>)
- · Operating Agreement (transitx.com/process/operating_agreement.html)
- General Q & A (<u>transitx.com/QandA.html</u>)

Addendum

The remaining pages of this proposal provide project-specific details:

- Financial Project Summary with Pro Forma, pages 6-7
- Project Overview, Impact, and Model inputs, pages 8-9
- Taxes and Fees, pages 10-11
- Fares, page 12

We look forward to working with you to improve the quality of life for Antipolo through better transportation.

Sincerely,

CEO, Transit X

Project Summary

Project Solar-powered automated

Description transportation network infrastructure

Project type Project financing of Green Infrastructure

Project cost \$416 million

Structure Equity and Debt

Debt term 10 years @ 5%

Equity terms 51% average IRR through 12 yrs

Using a waterfall profit distribution of:
1. 90/10 split until Return of Capital,
2. then 50/50 until Target IRR met

3. then 10/90 onwards

Benefits to society and environment

Extremely high

Financials

(US\$ in millions)

	Year 1	Total Years 1-12
Gross Revenues	328	7,987
Taxes and fees	16	399
Debt service	\$38	\$377

About Transit X

Transit X designs, builds, and operates solar-electric shared mobility infrastructure to supplant buses, trains, cars, and trucks. Transit X offers its service to municipalities and commercial developers. First pilots will begin operations by 2019. Transit X is a privately held company founded in 2015, based in Boston, Mass, and intends to be certified as a public benefit company.

Prior to close

Model Inputs and Assumptions

Route length (km) 53

Starting number of pods 2,694

Projected revenue growth 15%

Project Cost \$416,276,204

% Debt financed 70%

Debt \$291,393,342

Equity \$124,882,861

Capital return per year \$24,976,572

Target IRR 15%

Target return per year \$18,732,429

Debt payment (per year) \$37,736,771

The revenue estimates are conservative because they only show revenue from passenger fares, freight, and advertising, which may be less than 60% of total revenue. A substantial revenue stream can be expected from developer fees, private leasing, private branch & stops, subsidies, municipal contracts, carbon credits, water delivery, conduit leasing, 3rd-party services, mail & package delivery, para-transit, private shuttles, sale of surplus power to grid, and naming rights.

Travel per year per pod (km) 168,185

Revenue per vehicle-km (US\$) 0.72

OPEX as % of project cost 5%

Debt Interest rate 5%

Debt term (yrs) 10

Years to return equity capital 5

Profit share when below capital return 90%

Profit share when below Target IRR 50%

Profit share when above Target IRR 10%

46	Area of one parking lot space	23	***	
47	Commercial income of land	\$0	per m ²	PHP
48	Distance from roadway that is convenient	0.25	km	
49	Stops per km	2.0		
50	Solar panel area per meter of track	2.0		
51	Cost of sustainable energy and storage	\$0.15	per kWh	
52	Global Horizontal Irradiance (GHI)		kWh/m²/day	
53	Cost to generate sustainable energy	\$2,000	•	
54	Energy storage cost		per kWh	
55	Energy storage capacity	1	days	

Pod & Car

	Pod	Car
Service life (years)	20	12
Full cost of vehicle per year	\$200	\$9,000
Public cost to maintain infrastructure (per km)	\$0	\$100,000
Energy Efficiency in MPGe	1188	24
Energy Efficiency in liters/100km	0.20	9.8
Energy used (Watt-hours/km)	28	1375
mass of CO2 per vehicle per km (kg)	0	0.09875
Vehicle mass (kg)	45	1950
Average speed o urban travel (km/h)	72	16
Typical travel time (in minutes) for 5 km trip	4	17
Fare/cost per km	\$0.09	\$0.62
Number of deaths per 100M passenger-km	0.00001	1
Number of injuries per 100M passenger-km	0.0006	62
Volume to park (cubic meters)	5.7	70.9

Model Inputs (cont)

56	Name of region or project	Antipolo, Philippines
57	Currency name	PHP
58	Equal to US\$1	51
59	Sustainable energy/electricity generation & storage as	CAPEX
60	Land area of region (sq. km)	306
61	Number of people in region	776,386
62	% travel within region	50%
63	Road coverage (% served by roads)	15%
64	Coverage: % of pop. convenient (5 min walk) to Transit X	95%
65	Median household income (US\$)	3,500
66	Convenient walk time to stop	5
67	Triple-speed route length	0
68	Water crossing route length	0
69	Solar production ratio	1.57
70	EPC costs & contingency	30%

Taxes and Fees

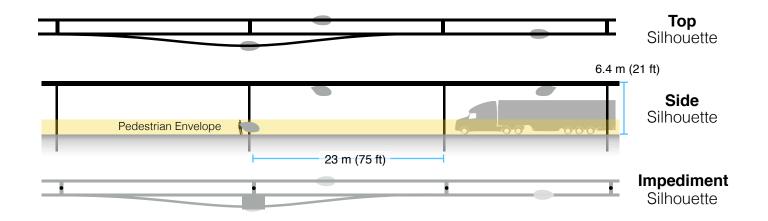

4% of gross revenue proportioned to air rights owners and a municipal fee/tax of 1% of gross revenue. Both air rights and fee/tax have a minimum payment based on the Footprint and the Transit X Commercial Rate (TXCR).

Municipal rates

	•		
2	Total commercial land (estimated)	4,590,000 m ²	
3	Total commercial muni revenue (US\$)	\$321,300	16,386,300 PHP
4	TXCR (Transit X Commercial Rate)	\$0.07 per m ²	3.6 PHP
5	TXCR is the yearly tax rate per land area. Calculation: total land area of commercial properties in the municipality, divided by all the municipal income generated by those properties. The TXCR is used to calculate the minimum tax/ fee.		
6	Project Revenue		
7	Length of Transit X route	53 km	
8	Estimated gross revenue per unit length	\$14,260,316 per km	727,276,114 PHP
9			
10	Municipal Tax	% of gross revenue with minimum.	
11	1% gross revenue	\$142,603 per route-km	7,272,761 PHP
12	Minimum per year	\$116 per route-km	
13	Air Rights Leasing Fee	% of gross revenue with minimum.	Proportioned based on length.
14	% of route on municipal land	90%	
15	4% gross revenue	\$570,413 per route-km	29,091,045 PHP
16	Minimum per year	\$116 per route-km	
17	Taxes, Fees, Programs		
18	Paid to Municipality	\$35,025,024 per year	1,786,276,223 PHP
19	with minimum	\$11,734	
20	Paid to Private land owners	\$3,045,654 if 10% of RoW	is over private property
21	with minimum	\$618	
22	For livelihood programs	\$139,876,065 is US\$180.16 p	per capita

Fair Fares

Fares will be similar to existing mass transit, and several times less than taxis or ride-sharing services. Transit X Fair Fare is a universal passenger fare model that applies to all regions and all times. Fares are proportional to the median income of the area and inversely proportional to per capita use, so the more people that use Transit X, the lower the base fare. Market-rate fares are offset by Half-price fares. There are no pre-set escalations.

			0% of use	50% of use	+25% Income	0 of use	50% market fares
1	Median household income	US\$	3,500	\$3,500	\$4,375	\$3,500	\$3,500
